📦 Professional Summary

Senior Cloud Infrastructure Engineer with a strong focus on automation and DevOps practices. I thrive on designing and implementing scalable, resilient cloud infrastructure and fully automated CI/CD pipelines. I enjoy solving complex problems through Infrastructure as Code and streamlining deployment processes to accelerate delivery and improve reliability.

🕒 Experience

Senior Cloud Infrastructure Engineer - AI Platform Lead

02/2026 – Current

Sitecore

- Led the design and implementation of a **Context Engineering Platform**, a production-grade **RAG** (Retrieval-Augmented Generation) infrastructure serving as an AI enabler for the entire department. The platform addressed a critical team challenge: discovering and retrieving needed information scattered across ~250 repositories with multiple master branches. The solution provides relevant context to Copilot agents, IDE extensions, and API consumers, enabling teams to quickly find information that was previously difficult to locate.
- Architected a comprehensive RAG platform with Azure AI Search for hybrid (vector + keyword) indexing, exposing context via an **MCP** (Model Context Protocol) server deployed on Azure Container Apps, with automated data ingestion from GitHub and Azure DevOps repositories.
- Led infrastructure-as-code implementation using Terraform with **GitHub Actions CI/CD pipelines** for zero-downtime blue-green deployments, managed identities for secure service-to-service communication, and comprehensive OpenTelemetry instrumentation with Azure Monitor integration.
- Engineered the platform with enterprise-grade security (zero shared keys at runtime, RBAC-only data-plane access, PaaS firewalls, private endpoints), high availability (99.5% uptime target with Front Door and multi-replica Container Apps), and disaster recovery (cold standby strategy with cross-region storage replication).
- Designed and implemented a central mechanism for **distributing AI Skills** to all repositories across the department, enabling seamless propagation of AI capabilities and standardized

interfaces for teams to leverage the platform's context-enriched services organization-wide.

- Built the context ingestion layer using a **repository crawler tool** that automatically extracts and processes local context from each of the ~250 repositories, enabling the platform to maintain accurate, repository-specific metadata and content for comprehensive indexing and contextual retrieval.

Senior Cloud Infrastructure Engineer - Technical Lead

03/2024 – 02/2026

Sitecore

- Technical leader in the Managed Cloud domain, driving the development, deployment, and operational success of cloud-based products hosted entirely in Azure Public Cloud.
- Lead and contribute to the **fully automated release process** of code and documentation delivered to the Sitecore Operations team, incorporating automated end-to-end tests with automatic bug creation on failure to ensure quality, consistency, and deployment confidence.
- Lead the team in building and maintaining CI/CD pipelines using **Azure DevOps**, PowerShell, Terraform, Ansible, Python, and Bicep to provision, manage, and upgrade Managed Cloud PaaS products based on Azure App Services and containerized solutions based on AKS, both equipped with integrated disaster recovery strategies.
- Design and implement self-hosted **Solr** solutions with disaster recovery, enabling high availability and fault tolerance across customer environments.
- Spearheaded the creation of a custom VMSS-based Azure DevOps agent pool using Terraform, Ansible, and Packer, enhancing pipeline performance, elasticity, and cost-efficiency for Managed Cloud deployments.

Cloud Automation Engineer

11/2022 – 03/2024

Sitecore

Cloud Ops Engineer 2

09/2021 – 11/2022

Citrix Systems

- Full-time work as Cloud Ops Engineer, involved in the core work related with the **FedRAMP compliance** project of Citrix.
- Team consisted of members from three different time zones (US, Greece, India), with the main objective of creating and maintaining a FedRAMP compliance platform used by Citrix product teams for their deployments and releases.
- Used **Azure Government** to host platform services (CI/CD tools: Team City, Jenkins, HashiCorp Vault; Monitor Tools: Splunk, Tenable, OWASP Zap; Active Directory services: Domain Controllers, DNS, SMTP, RDG).
- Lead the refactoring of the entire infrastructure code base (HashiCorp Terraform) using a modular approach, with Continuous Development using a Jenkins pipeline and unit testing with Go Lang and the Terratest Libraries.
- Lead all the work to establish an HA HashiCorp Vault with a dedicated Squid proxy in the FedRAMP platform.

- Configured multiple services (Windows and Linux OS based) with Ansible, along with the creation of OS hardening images based on CIS Benchmarks.
- Designed a FedRAMP Compliance Alerting Solution with Azure Monitor and Azure Functions.
- Worked on Python Object-Oriented code related with User Access Reviews and MSSQL Database.
- Work on an on-call schedule with PagerDuty.

Cloud Ops Engineer

Citrix Systems

01/09/2019 - 27/09/2021

Software Engineer Intern

Citrix Systems

01/03/2019 - 31/05/2019

- Full-time work as Software Engineer Intern.

Education

Master Computer Engineering and Informatics

Polytechnic University of Patras

01/10/2013 - 30/07/2019

Digital Skills

★ WORK DAILY

Azure

HashiCorp Terraform

Azure DevOps pipelines

GitHub Actions

Ansible

PowerShell

✔ WORK OFTEN

Python

Azure AI Foundry and Search

Kubernetes

Docker

Bicep

ARM templates

Bash

HashiCorp Vagrant

HashiCorp Packer

HashiCorp Vault

Golang

IIS and Microsoft Active Directory

Jenkins

Ubuntu Linux

Windows Server

Certifications

- ✓ Microsoft Azure Fundamentals (AZ-900)

- ✓ Microsoft Azure Administrator Associate (AZ-104)
- ✓ Microsoft Azure Network Engineer Associate (AZ-700)
- ✓ Microsoft DevOps Engineer Expert (AZ-400)
- ✓ HashiCorp Terraform Associate (003)

Language Skills

Mother Tongue: Greek

English: Listening **B1** | Reading **B1** | Writing **B1**
